How to do:

1. Switch power on (caution: default mode is laser scanning, so avoid its laser light pointing at somebody in front of u and yourself)

2.   For wired cameras detection:

   adjust one of your eyes in the line of the view finder. The camera lens will reflect the constantly flashing laser beam back as a brightly red spot in your view. The flashing frequency can be easily adjusted for your selection, different frequency referring to the scanning modes in spec below.
