From customers' requirements, Werson Fencing Systems offers a comprehensive service to design, manufacture and install fencing. All products are designed in accordance with the requirements of ISO 9001:2000 and all meet the appropriate health and safety standards. Werson Fencing System is an accredited manufacturer under the Secured by Design scheme.

Chain link fencing can be made of [galvanized wire](#), plastic coated galvanized wire or aluminum wire. There are two types of end: barbed or knuckled end. End of edge for Chain Link Fabrics have knuckle-knuckle, knuckle-barbed and barbed-barbed. Typical opening type of chain link fabrics is diamond opening. Color chain link fencing is sometimes called vinyl or color-coated. In this process, steel wire is first coated with zinc and then covered with a vinyl polymer coating that helps prevent rust and adds color. The vinyl is generally added to both the framework and the fabric of the [fence](#).

Some chain link fencing products use an aluminized coating to cover the steel in place of the zinc that creates a highly reflective finish. Regardless of the finish, all chain-link products offer a durable, economical fence system.

Chain link fence is used as fencing for sports field, river banks, construction and residence, also animal fencing. Especially, well suitable for a wide range of application, for example for enclosing Lawn, Road. Steel diamond mesh has a heavy galvanized coating to ensure a long life.
