

High Tensile Field Fencing products are made to withstand the harshness of the grassland climate, which are made of graduated steel wire mesh knotted by special machines popularly used in fields and grassland for breeding of deer, cattle and other animals. Our fence products enjoy innovative design, firm structure, flat surface, uniform opening, good flexibility and long service life. The steel wire used in producing field fence offers high strength against the violent clashing of horses and other animals to ensure the safety. The zinc coating layer adds corrosion and rust resistance for the fences.

Features: Field fences have innovative and firm structure, flat surface, uniform opening and good integration. This product offers good flexibility; good pressure resistance, corrosion resistance and weather resistance properties and can serve for a very long time. Even the cut pieces will not deform under pressure. It has excellent corrosion resistance and anti-oxidizing property. Unlike the welded wire mesh fences with the welding spots getting easily broken, our grassland fences are firm forever once installed and make the best materials for protecting grassland, forestry, highway and environments.

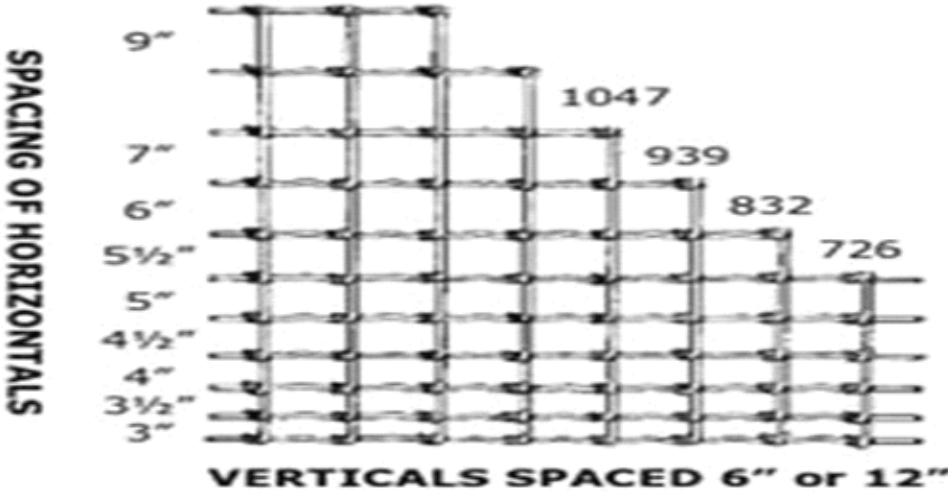

Standard Size of Field Fence						
Serial No.	Mesh Size Type	Specification	Total Weight (kg)	Bottom And Top Wire Dia(mm)	Inner Wire Dia (mm)	Dia of Roll (mm)
1	7/150/8 13/50	102+114+127+140+152+ 178	19.3	2.5	2.0	280
2	8/150/8 13/50	89(75)+89+102+114+127 +140+152	20.8	2.5	2.0	280
