

# Immunization Supplement

Rare Japanese “Hanabiratake” mushroom tablets to boost your immune system!

## Benefits

- Supplement for increased immune function, anticancer, antitumor properties, antioxidant, lowering of blood sugar and reduction of blood pressure.
- Dietary supplement in tablet form with rare Hanabiratake Mushrooms (KSC-03 Type with the highest Beta-Glucan content available in Japan: Beta-Glucan 47.7g/100gr).
- Compound Hanabiratake Mushroom (*Sparassis Crispa*)
- Meshimakobu Mushroom (*Phellinus Linteus*) mycelia.
- All mushrooms in this supplement are exclusively grown, harvested and processed in Japan!!

## Recommended for all those who

- Wish to prevent diseases and keep a healthy lifestyle including cancer prevention.
- Have atopy and/or predisposition toward allergies.
- Suffer from diabetes.
- Suffer from high blood pressure.

## Details

- Contents : Tablets x 240.
- Presentation: Glass bottle in box.
- Suggested intake: 4-8 tablets per day.
- Type: Health Supplement.

## Ingredients

- Hanabiratake Mushroom
- Meshimakobu Mushroom Mycelia
- Microcrystalline cellulose
- Dextrin
- Lactose
- Sugar Ester
- Silicon dioxide

## Explanation of Ingredients

**Hanabiratake Mushrooms** (*aka sparassis crispa*) is a mushroom grown in Japan whose properties have been proven by scientific research indicating that Beta-Glucan from these mushrooms possess antitumor activities and enhances hematopoietic response.

Additionally, Japanese studies have also shown that cancerous mice fed with *crispa* for 5 weeks reduced tumor sizes and prolonged survival times by increasing the overall immunization and defense system.

When compared with *Agaricus subrufescens* (another species of mushroom with purported medicinal properties), the hanabiratake used in this formulation shows 4 times more amount of Beta-Glucan.
