Explanation of Ingredients

Collagen is a fibrous protein originally present in the body, which is a key element for keeping a moisturized and smooth skin. Collagen is a natural substance in our body which decreases with age. Moreover, collagen is critical for the health of joints, cartilage, tendons, bones, and all connective human tissue.

Our collagen powder excludes harsh processing and artificial materials—bleaching and degreasing chemicals as well as additives, flavorings or preservatives are NOT used at all. In other words, our collagen product is made of fresh fish scale; hydrolyze processed enzymolysis, low member process. No preservatives or additives were used during the manufacturing process and the end product is 100% pure collagen.
