WDS Series LCD Display Electronic Tensile Testing Machine

Applications & Functions

These series machine is mainly used for tensile and compression test for rubber, plastic, electrical wire and cable, composite, plastic profiled bar, waterproof roll, metal and non-metal materials etc. If added special fixtures, it can do some other tests as well. It is widely used in many fields such as industry factories, mineral enterprise, quality inspection, research, metallurgy, rubber & plastics, knitting materials, high schools and so on. The machines can meet ASTM, ISO, DIN standards and so on.

Main Technical Specifications:

Model	WDS-01/02/05/1/2/5	WDS-5/WDS-10/WDS-20
Host Machine Structure	Single column type	Table type
Max Load Capacity	100N/ 200N/500N/1kN/2kN/5kN	5kN/10kN/20kN
Class of Machine	1.0	
Load Range	2%-100%FS	
Load Accuracy	Within $\pm 1\%$ of max load	
Load Resolution	1/200000	
Range of Deformation Measurement	2%-100%FS	
Resolution of Deformation	0.01mm	
Accuracy of Displacement	Within $\pm 1\%$ of indicating value	
Resolution of Displacement	0.01mm	
Range of Testing Speed	0.01-500mm/min	
Max Tensile Space (mm)	900mm	
Dimensions of Host Machine (mm)	500*300*1650	730*400*1800
Net Weight(KG)	150	200
