

MZJ360-3 high pressure automatic solid and blind hole brick maker, it's patent products, have received patent certificate from government department. Until now, Sanxiong factory is an exclusive manufacturer who can produce this series brick maker.

Transport a set of brick maker for customers:

| Technical parameters:              |            |
|------------------------------------|------------|
| Production capacity bricks (pcs/h) | 3200-3600  |
| Nominal pressure (MPa)             | 360        |
| Each time formation (pcs/once)     | 3          |
| Make bricks specification (mm)     | 240*115*53 |
|                                    | 240*115*90 |
|                                    | 240*190*90 |
|                                    | 240*240*90 |
| Motor of host machine (kw)         | 18.5       |
| Weight (t)                         | 5.5        |

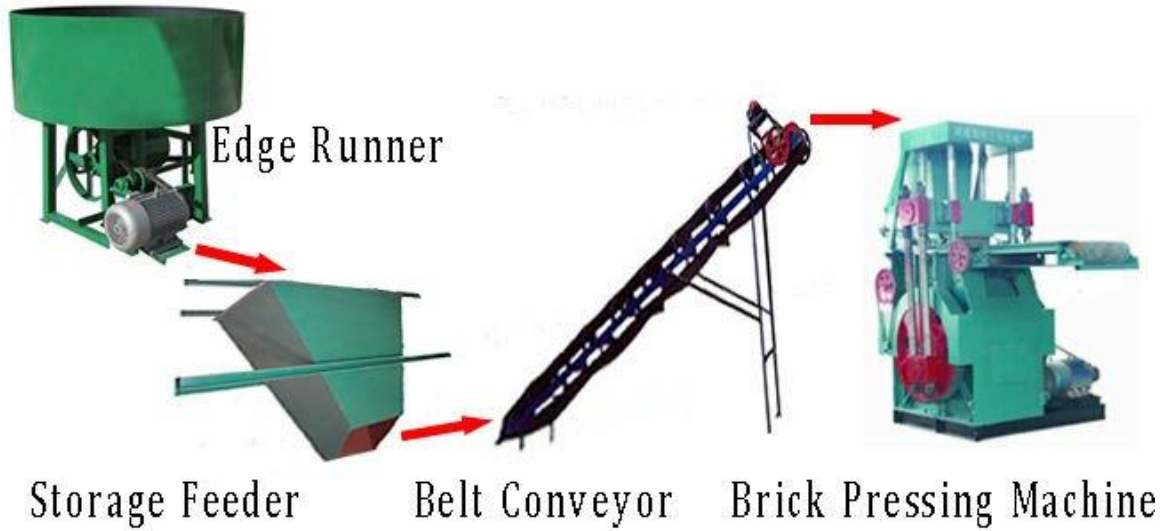

Note: for other brick size, please contact for more information.

Wheel gear of brick maker:

Edge runner, feeder, belt conveyor, brick maker consist of simple brick making production line.

# High Pressure Brick Pressing Machine Production Line

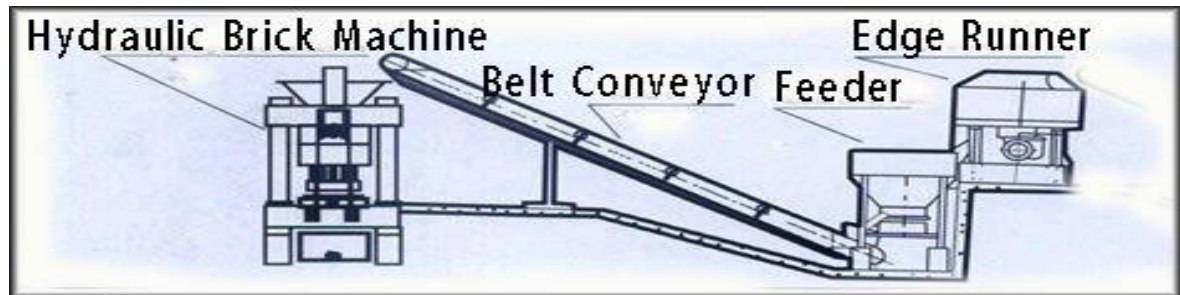

It's simple and effective!      Easy set up, easy operate and control, low failure. Brick high density, good formation.

We also make other high pressure hydraulic brick maker:

High pressure brick maker, high pressure, brick no need pallets, good formation, can stack directly.

Due to it's special structure and made of good materials, High pressure brick maker is very durable, very low failure rate, just normal wear. So, it's save a lot!

Full brick making equipment, all make for customers!

**Considerable service, You can rest assured!**
