

300t hydraulic brick press machine, has two types, single sided pressure and double sided pressure, double sided pressure machine price is little higher than single one. Customer can select machines that they prefer to according to actual needs.

The machine pressed bricks dictate the process smooth and stress, high degree of automation, it has good quality products, high strength, high yield, the standard dimensions and so on.

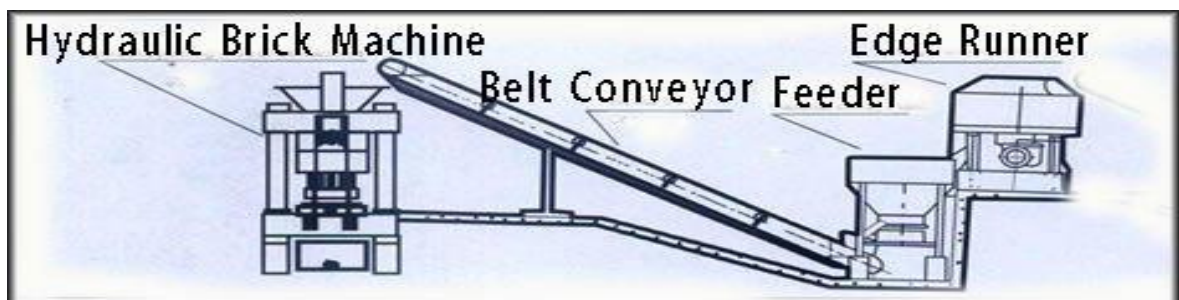

315T brick press machine main parameter:

Model	Nominal pressure (KN)	Capacity (pcs/hr)	power (Kw)	Workers
315t	315	2800-3000	22-30	8-12

The machine applies to varieties, molds can be prepared to replace standard bricks, blind-hole hollow brick other profiled products.
