Application:

Applied for Unqualified Turbine Oil, especially the seriously emulsified turbine oil.

This series, which can rapidly & effectively remove water, gas & impurities, aiming at turbine oil's nature of high water content, easily emulsified and high impurity content, make the oil reach new oil's standard.

Features & advantages:

- 1. Breaking emulsification thoroughly by Adopting high-molecule material, After treatment, the oil is very difficult to be emulsified again.
- 2. Adopting high-technology dehydration method, can dewatering thoroughly. -----Can remove liquid water 100%, remove free water 100% and remove dissolved water 80%.
- 3. High Oil Cleaness after treatment-----can be reach NAS 6 Grade(NAS 1638)---With Zhongneng's unique Technology, can remove impurities completely by Double FH Trapezoidal flit element and high-molecule absorbing together.
- 4. With the trapezoidal, spiral, automatic back flushing system.
- 5. With the advanced dielectric condensation devices.
- 6. Can be work on-line with hydroturbine & Turbine automatically without person.
- 7. Its dehydration volume is large and It can drain off the water on line.
- 8. Can Prevent Lubrication System from damage, can effectively extend the lifetime of oil and protect Turbine & other machines.
