

PEOPLE ORIENTED

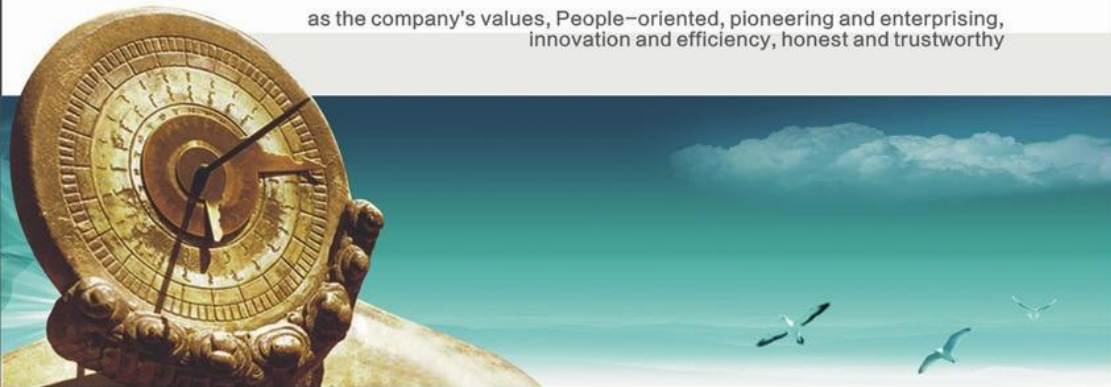

INNOVATIVE AND EFFICIENT

FORGE AHEAD

HONEST AND TRUSTWORTHY

as the company's values, People-oriented, pioneering and enterprising, innovation and efficiency, honest and trustworthy

High Reliability Electrochemical product, High Reliability Business Cooperation.
BUSINESS DEPARTMENT

COMPANY PROFILE

Xi'an Taijin Industrial Electrochemical Technology Co., Ltd., is a Hi-tech enterprise in developing and manufacturing the Titanium anode, Glass-to-Metal seal products and electrolysed devices. Located in Jingwei Industrial park, Xi'an Economic & Technologic Development Zone, Xi'an Taijin covers a total area of over 50 acres. The registered capital is RMB 80 million. There are four functional departments, one R&D centre and three business units. The company has over 260 employees, therein, over 67 masters.

Our company have already attained ISO9001 Quality Inspection Certificate and our national Hi-tech and GJB9001A-2008 Certificates

Specially for our titanium anode. With our intelligent coating formulation from standard designs to custom designs, our MMO coated titanium electrodes have been successfully used in a wide range of electrochemical applications and exported to UK, USA, Finland, Korea, Middle East and so on. Please select us as your honest and reliable partner to solve any electrochemical problem.

Rely on the Northwest Institute of Non-ferrous Metal Research, we focus on the developing and manufacturing of titanium MMO & platinized anode, cathode, nonferrous metal and other deep-processed products as well as Glass-to-Metal products and the Complete sets of Equipment products. At the same time, we have opened many subjects in the theory research and application. We got more than 30 projects from the ministry of science, the major science and technology innovation fund, Xi'an science and technology innovation fund.

BUSINESS DEPARTMENT

Titanium anode products of our division was the first one who stepped in this field in China. The Titanium Anode Division formed in the late 1980s. In developed these years, the theoretical and applied research of our company in the titanium anode has opened a number of topics, and also a lot of rewards as well. Innovation Fund of Shaanxi Province and Xi'an Science and Technology Trade Fund Project, the title of the national key new product and Xi'an technology trade program funded by the country's strong support.

Our company has successfully titanium anode research techniques and results into products, developed products have mass production, performance titanium coating anode for the electrochemical industry in many areas. The production of titanium anode products, stable performance, corrosion resistance and long service life characteristics. The products have been widely acclaimed by national and customers, preparation technology has reached the international advanced level, and a large number of exports to South Korea, the United Kingdom, Spain, the Middle East and other countries and regions.
