

Powder coating set with head-up transport system

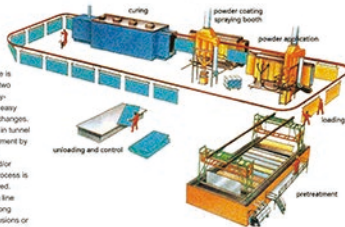

According to your workshop space and your products details. To choose the design that will meet your requirement

Automatic Powder Application Powder coating line with one booth, typical equipment used on large series in one color.

Powder Coating Line with DIP-Pre-treatment

The coating line is equipped with two moveable spray-booths. Allows easy and fast color changes. Curing is done in tunnel oven. Pre-treatment by dip immersion; chromating and/or phosphating process is usually employed. Typical coating line when coating long items, i.e. extrusions or larger sheets.
