Angular Contact Ball Bearing (60)

Cylindrical Roller Bearing (64)

Spherical Roller Bearing (78)

Taper Roller Bearing (87)

Deep Groove Ball Bearing (35)

Thrust Roller Bearing (19)

Slewing Ring Bearing (14)

Thin Section Bearings (23)

Cross Roller Bearing (36)

Ceramic Ball Bearings (13)

Dental Drill Bearing (12)

Non Standard Bearings (7)

Mud Motor Bearings (23)

Harmonic Gear Reducer (3)

Split Roller Bearing (24)

Insulated Motor Bearings (4)

Worm Gear Slew Drive (37)

We got the samples and the testing results is great,thanks for your work!

— Chris

Received bearings.The quality is good. Warm and thoughtful service,fast shipment.I will keep doing business with your trustworthy company.

— John Grafton

3 years' cooperation with satisfied service and quality.We attain many local customers gratitude and supports.Thank

— Mohammad EL ASSWAD

We have tested the bearing 23082 and I am so satisfied with the bearing quality.Good package and best price have given a big favor in our business.

— Kwon

Your quality is good,but the prices is a little higher!Anyway,quality is first,but please also give me one better prices,thanks!

— Michile

All is goes well,thanks for your cooperation!

— Giorgia

Drilling Motor Angular Contact Bearings Back To Back , GE Dual Ball Bearing

Large Image : Drilling Motor Angular Contact Bearings Back To Back , GE Dual Ball Bearing

Product Details:

Place of Origin:	LUOYANG
Brand Name:	MONTON
Certification:	ISO9001
Model Number:	128726K

Payment & Shipping Terms:

Minimum Order Quantity:	1
Price:	400USD
Packaging Details:	single box
Delivery Time:	35days
Payment Terms:	TT
Supply Ability:	1000/pcs/week

Detailed Product Description

Material:	55SiMoVA Or Case Hardened Material 8620	Row:	7row Or 8 Row Or More
Application:	Oil Drilling Motor Or Downhole Motor On The Oil Industry	Customer:	Oil Company SLB,Halliburton Or GE
Market:	USA,Russia,Iran	Bearing Life:	200hs

Downhole motor bearings

Main Customers:

Oil company like:SLB,Halliburton or GE

Main application:

Downhole motor or drilling motor

Product Description

The bearings in a mud motor at the end of a drill string would place a huge influence on productivity and reliability in terms of oil drilling or gas drilling.The working condition of these mud motor bearings are extremely harsh: the bearings bear heavy axial and shock loads, and they are also exposedwith highly abrasive mud.

- Special steel for all bearing components
- Full complement bearing
- Precision matched rings
- Unique bearing design to support heavy axial drilling loads

Angular contact thrust ball bearings, multi row

Basic dimensions			Load capacity		Maximum rotation speed (lubrication non-fluid) rpm	Designation	Mass	Dimensions		Angle of contact
d	D	B	dyn. C	stat. C ₀				GOST	d	
mm			kN				kg	mm	grado	
65	128	351,5	199,1	169,6	1800	128713	24,2	65	60	
80	148	363,0	260,0	310,0	1500	128916M	30,0	80	60

Application

Down hole motor or drilling motor for the oil drilling industry

Bearing Assembly of Downhole Motor is used to transmit motor rotary dynamic force to the bit, meanwhile to withstand axial and radial load from drilling weight. Inside of the Bearing Assembly, Monton uses TC Radial Bearing and a stacked thrust bearings. The thrust bearings support the downward force resulting from the “weight on bit” (WOB) and the loads from the combination of hydraulic thrust and weight loads from internal components. Monton provides different bearing assemblies, designed to meet the diverse requirements of the drilling industry.

Downhole drilling motor bearings

Whether you're drilling for oil or gas, the bearings in a mud motor at the end of a drill string have a direct impact on productivity and reliability. These mud motor bearings have to endure extreme operating conditions. In addition to severe axial and shock loads, these bearings are “lubricated” with highly abrasive mud, which for a bearing is the definition of an extreme operating condition.

How the new bearing works ?

The typical mud motor bearing contains between 8 and 12 rows for design optimization. When the bearing is new, the majority of the load is accommodated by the first four or five rows. As each row starts to wear, the load is shifted to the next row and the next until all the rows are worn equally. Then, the load is shifted back to the first row and the process is repeated. This unique Monton design enables the bearing to last significantly longer than previous bearing designs.

About the redesign process

To significantly improve bearing performance and reliability, Monton engineers used proprietary Monton design and simulation tools to

- accurately define the behaviour of a bearing stack
- redesign the bearing to minimize stresses and optimise load carrying capacity
- test new designs and materials. With the Monton virtual test rig, engineers were able to identify and correct the problem of cracked rings and sheared balls – two common problems with these bearing

Product features

- Special steel for all bearing components
- Full complement bearing
- Precision matched rings
- Unique bearing design to support heavy axial drilling loads

Customer benefits

- Improved wear-resistance
- Increased load carrying capacity
- Optimized load distribution
- Increased robustness
- Improved reliability
- Customized design
